

Learner's Guide to Validation Rules (Config)

PERFORM THIS EXERCISE ON THE CONFIGURATION SYSTEM

What is this guide?

This guide contains 3 exercises and detailed steps to perform them related to the use of configuring validation rules for the Analytics Tools Level 1 academy. Please perform each of the exercises when prompted by your instructors.

Learning objectives for this session

1. Define a validation rule after reviewing a data set
2. Create a validation rule to measure internal consistency
3. Create a validation rule measuring against a generated threshold

Time needed for this session

Live demo: 3 demos, ~ 30 mins each

Hands-on exercises: 3 exercises, ~ 30 mins each

Background on this topic/module

Validation rules are an excellent tool that can be used to measure a number of consistency measures within a DHIS2 system. As an example, they can be used to manage internal consistency by comparing two or more data items collected during the same process (for example, 2 malaria data items collected at the same time) as well as measuring external consistency by measuring values collected using different mechanisms (for example, data collected via a DHIS2 dataset along with data imported into DHIS2 from a survey).

These rules can be run directly in data entry - recommended if measuring internal consistency - as well as through a batch operation called validation analysis. In this session, you will review how to configure these rules in DHIS2.

Table of Contents/Quick Guide

 - [Review the data entry page and decide on a logical validation rule to create](#)
 - [Create the validation rule HIV tests positive <= HIV tests performed](#)
 - [Open and explain the Left Side Expression](#)
 - [Select the Operator](#)

- Open the Right Side Expression
 - Create a Validation Rule Group
 - Test the rule in validation rule analysis within the Data Quality App
 - End Exercise 1
- Activity 2 - Create Validation Rule #2 for stock
 - Review the data entry page and decide on a logical validation rule to create
 - Create the validation rule DPT-HepB-Hib doses given \leq Total Used DPT-HepB-Hip doses
 - Open and explain the Left Side Expression
 - Select the Operator
 - Open the Right Side Expression
 - Save the Rule when finished
 - Create a Validation Rule Group
 - Test the rule in validation rule analysis within the Data Quality App
 - End Activity 2
- [OPTIONAL] Activity 3 - Create a validation rule #3 using the DPT-HepB-Hib 2 threshold
 - Note: A Predictor is used to calculate the threshold value; this will not be covered in this academy
 - Create the validation rule [DPT-HepB-Hib 2 administered \leq DPT-HepB-Hib 2 dose threshold]
 - Open the Left Side Expression
 - Select the Operator
 - Open the Right Side Expression
 - Save the Rule when finished
 - Create a Validation Rule Group
 - Test the validation rule in validation analysis within the Data Quality app
 - End Activity 3

Exercise 1 - Create a Validation Rule for HIV

Example 1 from HIV Monthly Form

Review the data entry page and decide on a logical validation rule to create

We can use the following HIV dataset at the **Facility** level

Organisation Unit	Cardinal Hospital Gateway PHC		
Data Set	HIV Monthly ▼		
Period	January 2024 ▼	Prev year	Next year
Filter on section	Show all sections ▼		

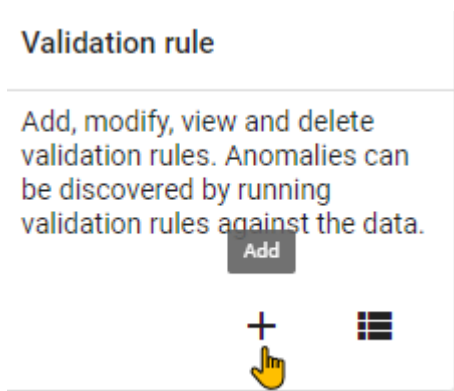

Let's create a rule in which HIV tests positive are less than or equal to HIV tests performed

Create the validation rule HIV tests positive \leq HIV tests performed

Navigate to the maintenance application in DHIS2 and select the "Validation" tab

Create a new rule by selecting the "+" icon underneath validation rule

Review the fields that will be used to describe the rule. Use your initials to create the rule. **[Note: this is only for practice purposes, you would not use initials in a real life scenario]**

Name (*)

SND_HIV tests positive <= HIV tests performed

Short name

Code

Description

HIV tests positive <= HIV tests performed

Instruction

Make follow up to respective whenever number of HIV test positive are greater than HIV test performed

Importance (*)

Medium

Period type (*)

Monthly

Here is the description and instruction

HIV tests positive should be less than or the same as HIV tests performed, if not make follow ups to respective facility

Describe the importance and period type as it relates to the validation rule before proceeding.

Open and explain the Left Side Expression

Open the left side expression and explain what you are intending to do. The rule you are creating is total HIV tests positive between male and female hence for the left side, select the (HIV tests positive Male + HIV tests positive Female)

Left side expr

Description

HIV - HIV tests positive Male + HIV - HIV tests positive Female

{ 06wdXXIZ5L2.P1YRwg1gzqV } + # { 06wdXXIZ5L2.aakXCEEzhGy }

CANCEL

SAVE

Note:

It is recommended to use the disaggregated data elements instead of the total data element as shown in the figure above e.g. HIV tests positive Male + HIV tests positive Female. This is because during validation rule analysis, when looking at the details, if the total data element was selected the details will be empty and you will not be able to drill down to identify where the problem originates from.

Select "Save" once the left side has been selected.

Select the Operator

It is "Less than or equal to" in this case, hence select the Less than or equal to operator.

Equal to

Not equal to

Greater than

Greater than or equal to

Less than

Less than or equal to

Compulsory pair

Exclusive pair

Open the Right Side Expression

You will need to do the following for the right side expression:

HIV tests performed Male + HIV tests performed Female,

Create this expression, explaining what you are doing during each step of the way

Right side expr

Missing value strategy
Never skip

☐ Sliding window

Description

HIV - HIV tests performed Male+HIV - HIV tests performed Female

#{sX7pWYXIVIIi.PiYRwg1gzqV} + #{sX7pWYXIVIIi.aakXCEEzhGy}

Did it work for you?

End Exercise 1

Activity 2 - Create Validation Rule #2 for stock

Review the data entry page and decide on a logical validation rule to create

We can use the following dataset at the ****Facility ****level

Organisation Unit	Cardinal Hospital Gateway PHC		
Data Set	Immunisation		
Period	January 2024	Prev year	Next year

Let's create a rule in which DPT-HepB-Hib doses given are less than or equal to Total DPT-HepB-Hib doses used and wasted.

Note:

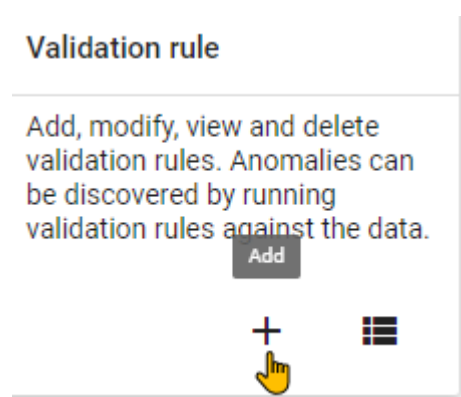

Total used= **(Starting balance + Received) - (VVM + Frozen + Expired + Broken + Missing + Ending balance)**

Create the validation rule DPT-HepB-Hib doses given <= Total Used DPT-HepB-Hip doses

Navigate to the maintenance application in DHIS2 and select the "Validation" tab

Create a new rule by selecting the "+" icon underneath validation rule

Review the fields that will be used to describe the rule. Use your initials to create the rule **[Note: this is only for practice purposes, you would not use initials in a real life scenario]**

Name (*)

SND_DPT-HepB-Hib doses given should be less than or equal to total used and wasted

Did it work for you?

End Activity 2

[OPTIONAL] Activity 3 - Create a validation rule #3 using the DPT-HepB-Hib 2 threshold

Note: this is an optional exercise and may not be covered by your instructor. You can perform this exercise if you want to have additional practice outside of the academy timeframe.

In this example, a rule will be created in which we compare an entered value to a calculated threshold. The steps to create the rule are very similar to the other examples.

Note: A Predictor is used to calculate the threshold value; this will not be covered in this academy

Create the validation rule [DPT-HepB-Hib 2 administered <= DPT-HepB-Hib 2 dose threshold]

Review and understand the fields that will be used to create the rule. As mentioned above the data element used for the threshold is a computed variable generated from a predictor, a concept that is not covered in this academy. It has already been configured and available within the list of data elements; in practice you would also need to make this yourself if not already available.

Use your initials to create the rule.

Name (*)

ND_DPT-HepB-Hib 2 administered <= DPT-HepB-Hib 2 dose threshold

Short name
